

Modulating rotary actuator for 2 and 3 way control ball valves

- Torque 8 Nm
- Nominal voltage AC/DC 24 V
- Control: modulating DC 0 ... 10 V
- Position feedback DC 2 ... 10 V
- Running time 9 s

# Safety notes

- The actuator has been designed for use in stationary heating, ventilation and air conditioning systems and is not allowed to be used outside the specified field of application, especially in aircraft or in any other airborne means of transport.
- It may only be installed by suitably trained personnel. Any legal regulations or regulations issued by authorities must be observed during assembly.

# Modulating rotary actuator, AC/DC 24 V, 8 Nm, running time 9 s

#### Safety notes

#### (continued)

- · The switch for changing the direction of rotation may only be operated by authorised personnel. The direction of rotation must not be reversed in a frost protection circuit.
- The device may only be opened at the manufacturer's site. It does not contain any parts that can be replaced or repaired by the user.
- The cable must not be removed from the device.
- Self adaptation is necessary when the system is commissioned and after each adjustment of the angle (press the adaptation push-button)
- The device contains electrical and electronic components and is not allowed to be disposed of as household refuse. All locally valid regulations and requirements must be observed.

#### **Product features**

#### Mode of operation

The actuator is controlled with a standard modulating signal of DC 0 ... 10 V and moves to the position defined by the control signal. The measuring voltage U serves for the electrical display of the damper position 0 ... 100% and as slave control signal for other actuators.

#### Simple direct mounting

Straightforward direct mounting on the ball valve with only one screw. The assembly tool is integrated in the plug-on position indicator. The mounting position in relation to the fitting can be 

#### Manual override

Manual override with push-button possible (the gear is disengaged for as long as the button is pressed or remains locked).

#### Adjustable angle of rotation

Adjustable angle of rotation with mechanical end stops.

## High functional reliability

The actuator is overload-proof, requires no limit switches and automatically stops when the end stop is reached.

#### Position feedback U5

Operation of the ball valve is optimised by a limiting ring. This ring reduces the angle of rotation from 95° to 90°<, i.e. U5 will deviate from Y by approximately 0.3 V when the valve is closed.

#### Home position

When the supply voltage is switched on for the first time, i.e. at commissioning or after pressing the «gear disengagement» switch, the actuator moves to the home position.

Factory setting: Y2 (counter-clockwise rotation)

Rotary actuator	Rotary valve
<b>◯</b> Y2	A - AB = 0%
Y1. <b>/</b> ←	A - AB = 100%

The actuator then moves into the position defined by the control signal.

2.50 mm <sup>2</sup>	≤100 m	≤20 m	1 m (L <sub>1</sub> ) + 19 m (L <sub>2</sub> )

#### **Note** When

When several actuators are connected in parallel, the maximum cable length must be divided by the number of actuators.
