FIRŠT DIFFERENTIAL THERMOSTATS

for heating DHWT (domestic hot water tank)

2-POINT CONTROL 1/0

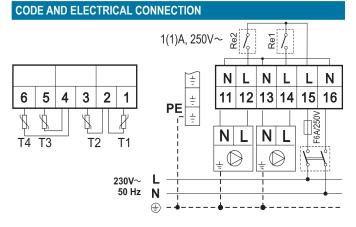

FIRŠT DTC 200/4 is a differential thermostat, designed for heating from one or two heating sources.

- Output for controlling motor actuated ball valve (type EMV 110 S9000) with circualtion pump for each heating circuit.
- Knob for setting temperature (DHWT), and temperature difference
- Setting working regime: with jumpers (various applications)
- Selector switch for choosing the operation (manual, auto), and to assist installer on start-up and technician during service.
- LED status indicator

OPERATION

DTC 200/4 is a differential thermostat, designed for heating DHWT (domestic hot water tank) from one or two heating sources (solar collectors, boilers, heat pumps).

TECHNICAL DATA: DIFFERENTIAL THERMOSTAT

Control: 2-point (P) Supply voltage: 230VAC, 50Hz

Power consumption: 4VA

Output relay rating: 1(1)A, 230VAC, 50Hz Temperature measuring range: -40..+120°C

Ambient temperature: 0..40°C Storage temperature: 0..70°C

Outputs: 2 x relay output 1(1)A, 230VAC, 50Hz,

Working contact SPST ---

4 x analog sensor Inputs:

Temperature setting

range (DHWT): 10..90°C

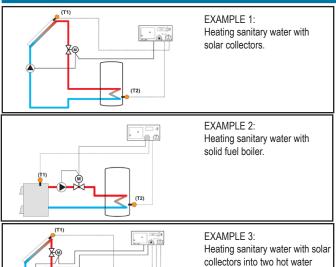

Temperature difference

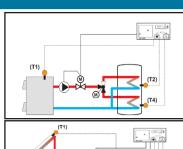

setting: 0..15K Hysteresis of thermostat: 1..2K KTY 81-210 Sensors type: Weight: 0,62 kg

Code Туре Description

13020 DTC 200/4 4 sensors, mounting kit

INSTALLATION EXAMPLES

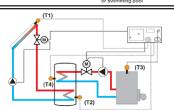

EXAMPLE 4:

Heating sanitary water with solid fuel boiler into one hot water tank with two exchangers.

Heating hot water in two water tanks with solar collectors.

EXAMPLE 6: Heating sanitary water in one

water tank with two exchangers with solar collectors and boiler.

Koroška cesta 56 SI-3320 Velenje SLOVENIA
