Actuators for Gas Valves

- On / Off safety shutoff feature conforming to EN161 in connection with SKPx5... actuators and gas valves supplied by Siemens
- Damped opening (rapid closing)
- Very low power consumption
- Suitable for gases of gas families I...III
- Optionally with / without end switch (factory-set)
- Plug-in connection facility
- Electrical indication of operation
- Stroke indication
- Supplementary Data Sheets (refer to the Data Sheets on gas and air valves)

The SKPx5... / SKL25... and this Data Sheet are intended for use by OEMs which integrate the actuators in their products.
Use

### Modular concept

| SKPx5... / SKL25... actuators are designed for use with the following types of valves: |
|---|---|---|
| Type of valve | Medium | Data Sheet |
| VGG... | Natural gas | N7636 |
| VGF... | Gases of gas families I...III |  |
| VGH... |  |  |
| VGD2... | Natural gas | N7631 |
| VGD4... | Gases of gas families I...III |  |
| VRF... | Biogas | N7633 |
| VRH... | (used with SKPx5..., on request) |  |
| VLF... | Hot air | N7637 |

### Actuators SKPx5... in general

The combination of actuator and valve provides the following functions:
- Safety shutoff valve (SKP15...)
- Safety shutoff valve with gas pressure governor / controller (SKP25..., SKP55..., and SKP75...)

The Electrohydraulic actuators together with the valves are designed for use with gases of gas families I...III and air. They are used primarily on gas-fired combustion plant. The actuators open slowly and close rapidly. They can be combined with any of the above-mentioned valve types and nominal valve sizes. The actuator can be supplied with end switch (for indicating the fully closed position). For information about valve sizing, refer to the «Valve sizing chart» in the Data Sheet of the relevant valve.

### SKP25...

The SKP25... operates with a gas pressure governor and controls the gas pressure according to the setpoint preselected with the setpoint spring or air pressure signal.

Its field of use are primarily forced draft gas burners
- with mechanical air / fuel ratio control (SKP25.0...)
- with electronic air / fuel ratio control (SKP25.0...)
- with 2-stage setpoint changeover (SKP25.2...)
- with zero governor (SKP25.3...)
- with constant pressure governor and electric adjustment of the setpoint spring (SKP25.7...)

### SKL25...

The SKL25... actuators are of the same design as the SKP25..., but close more slowly (3...6 seconds). The SKL25... do not conform to the standards for gas applications and, for this reason, are only suited for use with air.

### SKP55...

The SKP55... operates with a differential gas pressure governor and controls a differential gas pressure according to a differential air pressure. The ratio of the differential pressures is 1-to-1 and constant across the entire air range.

Its field of use are predominantly
- combustion plant with combined heat recovery systems
- plant where pressure conditions in the burner and combustion chamber do not change in proportion to load changes
- burners with adjustable air / fuel mixing devices in the burner head
- plant with negative pressure levels on the gas or air side

### SKP75...

The SKP75... operates as a gas pressure ratio controller and provides control of the gas pressure depending on the pressure of the combustion air, ensuring that the adjustable gas / air ratio remains constant across the entire load range. Its field of use is primarily modulating forced draft gas burners.
**Warning notes**

To prevent injury to persons, damage to property or the environment, the following warning notes should be observed!

**Do not open, interfere with or modify the actuators!**

- All activities (mounting, installation and service work, etc.) must be performed by qualified staff.
- Check to ensure that the impulse pipes are correctly fitted and tight (SKP25..., SKP55..., SKP75...)
- Fall or shock can adversely affect the safety functions. Such actuators must not be put into operation, even if they do not exhibit any damage.
- Each time work has been carried out (mounting, installation, service work, etc.), check to ensure that wiring is in an orderly state and make the safety checks as described in «Commissioning notes».
- If mains voltage is fed to the end switch, protective earth must be connected to the actuator via the same plug (AGA65).
- Use of connectors conforming to DIN EN 175301-803-A is mandatory.
- The connectors used must feature cable strain relief.

SKP25.2...

- The magnet can reach high temperatures if activated for longer periods of time (risk of burns!)
The SKPx.xx1xx are supplied with the end switch factory-set

If the available gas pressure exceeds the maximum permissible operating pressure of the valve (VG... / VR...) / actuator (SKPx5...) (refer to the Data Sheet of the relevant valve), it must be lowered by an upstream pressure controller. The pressure switch for lack of gas must always be fitted upstream of the gas valve when used in connection with the actuator.

The impulse pipes must be installed such that the differential pressure can be acquired with no disturbance (unfavorable flow conditions). Pressure test points must not protrude and be flush with the inside diameter of the pipe or duct wall. The impulse lines to the governor / controller should be as short as possible, enabling the governor / controller to respond quickly should sudden load changes occur. The inside diameter of the impulse pipes must be a minimum of 6 mm.

In connection with the SKP25..., the 1/4" nozzles on the outlet side of the VG... gas valves can be used as pressure test points (prerequisite: gas control pressure setpoint > 10 mbar).

The SKP25..., SKL25..., SKP55..., SKP75...

Installation of impulse pipes:
In the case of unsafe combustion chamber pressure pipes (e.g. resulting from potential leaks). The setting must also be checked during operation without having the combustion chamber pipe connected, especially with respect to maximum burner capacity. The impulse pipes must be fitted such that the differential pressure can be acquired with no disturbance. With gas / air ratios > 3, the impulse pipes for the combustion air and the combustion chamber pressure must have an inside diameter of at least 8 mm. The impulse pipe for the combustion chamber pressure must be fitted such that the gases will cool down in the vicinity of the impulse pipe and condensing gases cannot enter the controller but will return to the combustion chamber.

Recommendations:
– The gas pressure should be acquired at a distance of 5 times the nominal pipe size downstream from the valve
– Do not use the lateral test points on the valve body for picking up the pressure

Considering the combustion chamber pressure:
If the resistance value of the combustion chamber / heat exchanger / stack system is constant, the combustion chamber pressure changes in proportion to the gas and combustion air pressure as the burner’s output changes. In that case, the combustion chamber pressure need not be fed to the SKP75... as a disturbance variable. However, if the combustion chamber pressure does not change to the same extent as the gas and air pressure – as this is the case in plants with flue gas fan or modulating flue gas damper – the combustion chamber pressure must be fed to the SKP75... as a disturbance variable, enabling the controller to counteract.
Mounting notes

- Ensure that the relevant national safety regulations are complied with.
- The quadratic arrangement of the fixing holes allows the actuator to be fitted in 4 different positions on the VG... valve, each step being 90° (depending on the type of VG... valve).
- The actuator can be mounted or replaced while the system is under pressure; sealing material is not required.
- Follow the Mounting Instructions included with the actuators:
  - for SKPx5... M7643 74 319 0419 0
  - for NEMA-Kit for SKPx5... / VG... M7643.2 74 319 0421 0
  - for SKL25... M7643 74 319 0419 0
  - for SKP25.2... M7643.4 74 319 0552 0
  - for SKP25.7... M7643.3 4 319 1979 0
- Electrical commissioning may only be performed when the actuator is fitted to the valve; otherwise, the actuator can be damaged.
- Power is supplied and connection of the end switch is made directly via a connecting cable (conforming to DIN EN 175301-803-A).
- The end switch is factory-set.
- The pump's stem must not be pulled out using the overstroke element since that part could become loose.

Actuators in general

- Do not pull here!
Installation and commissioning notes

Functioning principle of 1-stage actuator SKP15... with safety shutoff feature

When power is applied, the pump will be activated and the control valve closed. Oil is now pumped from the chamber below the piston to the pressure chamber above the piston. The oil pressure causes the piston to move downward, thereby opening the valve – against the pressure of the closing spring. The pump remains energized until the closing command is given. When power is removed, or in the event of a power failure, the pump will be deactivated and the control valve opened so that the closing spring pushes the piston back. The return flow system is sized such that the counter-stroke required for reaching the fully closed position is completed within about 0.6 seconds.

(Schematic drawing)

Legend

1 Piston
2 Oscillating pump
3 Oil reservoir
4 Pressure chamber
5 Stem
6 Closing spring
7 Control valve
8 End switch (optional)
The functioning principle (safety shutoff feature) is identical to that of the SKP15..., but with the help of their pneumatic governor, the SKP25..., SKP55... and SKP75... also control a bypass valve in the hydraulic circuit and thus the valve's opening position.

Setpoint adjustment «PGas» is made manually by turning the adjusting screw, which acts on the setpoint spring (for setpoint springs, refer to «Accessories»).
The SKP25.3... operates based on the equal pressure principle $P_L : P_G = 1:1$. By feeding fan pressure $P_L$ to the air connection, gas pressure $P_G$ follows in a fixed 1-to-1 ratio.

**Diagram:**
- **A** Gas / air ratio for stoichiometric combustion
- **B** With low-fire, the parallel displacement of the working characteristic leads to a larger amount of excess air in percent. The governor permits this parallel displacement in both directions: «Excess air» **B** and «Lack of air» **C**
Installation and commissioning notes (cont’d)

The SKP25.2... features 2-stage setpoint changeover for 2-stage gas burners.

Assembly of SKP25.2... and valve

(Schematic drawing)

Legend

2. Oscillating pump
3. Oil reservoir
4. Pressure side
5. Stem
6. Valve’s closing spring
7. Control valve
8. End switch (optional)
9. Bypass valve
10. High-fire screw (stage 2)
11. Low-fire screw (stage 1)
12. Connection for combustion chamber pressure PC (recommended in case of PGas stage 1 < 3 mbar)
   - If PC is not connected, a damping throttle AGA25.2 must be fitted if Pe > 20 mbar (application test)

Setpoint adjustment «PGas» is made manually by turning the adjusting screws (10 and 11), which act on the setpoint spring.

Setting example:
1. Set the low-fire load (stage 1):
   Set the low-fire screw (11) to the required pressure value (\( \cup \) +PGas).
2. Set the high-fire load (stage 2):
   Activate stage 2 and set the high-fire screw (10) to the required pressure value (\( \cup \) +PGas).
3. After setting the high-fire load, the low-fire load need be readjusted. Every high-fire setting / readjustment changes the low-fire setting!

Refer to Mounting Instructions M7643.4 (74 319 0552 0)

Default settings:
- Low-fire: 12 mbar
- High-fire: 55 mbar
The SKP25.4... is suited for the control of higher pressures. Standard spring 0...1,500 mbar.

Setpoint adjustment «PGas» is made manually by turning the adjusting screw, which acts on the setpoint spring (for setpoint springs, also refer to «Accessories»).

Installation and commissioning notes (cont’d)

The SKP25.7... works like the constant pressure governor SKP25..., but with electrical adjustment of the setpoint spring.

Its field of use are primarily
- atmospheric burners (modulating or multistage operation)
- single burners or groups of burners on industrial furnaces
- changes to the air ratio from a remote location in the case of burners using fixed ratio control

8 End switch (optional)
9 Position marker
10 Bypass valve
11 End switch ACS9.6 (optional)
12 Low-fire screw «wu»
13 High-fire screw «wo»

Setting example:
The low-fire pressure value (minimum pressure wu) must be set with the SQS37... removed, using the low-fire screw (12). The maximum high-fire setting must be made with the stem of the SQS37... (13) fully extended.

Refer to Mounting Instructions M7643.3 (4 319 1979 0)
Functioning principle of gas pressure governor with SQS37 motorized setpoint adjuster:

On the gas outlet side, the gas pressure governor maintains the pressure at the required setpoint. The electrical signal fed to the SQS37 changes the preadjusted setpoint in proportion to the length of the electrical pulse, either increasing or decreasing, depending on the direction of the pulse signal.

When the preset maximum or minimum setpoint is reached, the outlet pressure will remain at a constant level.

The time required to traverse the upper setpoint range \(\Delta w_0\) is the same in both directions.

Running time \(t\Delta w_0\) changes in proportion to the change of the upper setpoint range \(\Delta w_0\).

At the lower setpoint limitation \(\Delta w_u\), the SQS37 runs idle during the period of time \(t\Delta w_u\), which means that a certain part of it can occur as dead time.

* The steel-colored springs are fitted in the SKP25.7...

Setpoint springs for \(\Delta w_o\) cannot be used for \(\Delta w_u\), and vice versa (refer to spring dia. in the table). All combinations of \(\Delta w_o\) and \(\Delta w_u\) are possible.
The SKP55... operates with a differential pressure governor and a fixed differential pressure ratio of 1-to-1.

**Example:**
Adjusted gas / air ratio for burner operation with excess gas \( + \). The percentage of excess air is constant across the entire load range. Gas / air ratio adjustment with the adjustable orifice on the gas side (see position \( \circ \)).
Safety notes:
Air damper ② / orifice ③ must always be located as shown, which means that orifice ③ must be installed downstream from the air damper ②.
Gas valve ⑩ (VG...) / orifice ⑨ must always be located as shown, which means that orifice ⑨ must be installed downstream from the gas valve ⑩.

Legend

A Air heating coil (recuperator)
B Burner
M Actuator
SKP55…

- Adjustment of governor on modulating burners prior to startup:
  - Adjusting screw $c$ on the SKP55... should be set to a gas / air ratio curve which passes through the neutral point. The SKP55... is supplied with that factory setting.
  
  Adjustment in the field can be made as follows: 
  
  **Note:**
  
  Fit cap again before measuring the combustion value and after the setting is made.
  
  Turn adjusting screw $c$ in counterclockwise direction until spring $i$ is completely loose. Shut off the gas supply upstream of the SKP55... Switch on the SKP55... Turn adjusting screw $c$ in clockwise direction until valve opens.
  
  - Bring the adjustable orifice $\oplus$ to the precalculated value. That value with the same pressure differential on the air and gas side must lead to practically stochiometric combustion.
  
  - Start the burner and run it to about 90 % of the nominal load.
  
  - Measure the combustion quality and make adjustments of the flow rate with the adjustable orifice $\odot$ until optimum measured values are reached (fine adjustment).
  
  - Return to low-fire operation. Check the combustion and readjust if necessary the position of the working characteristic with the setting screw $c$ on the SKP55... until optimum measured values are reached. Clockwise rotation $\rightarrow$ more gas. Counterclockwise rotation $\rightarrow$ less gas, that is, parallel displacement of the working characteristic towards lack of air or excess air.
  
  - Limit the air damper $\ominus$ for low-fire operation.
  
  - If a significant parallel displacement of the working characteristic was required, the setting must be checked again at 90 % of the nominal load and then readjusted, if required.
  
  - Run the burner to the predefined nominal load with the help of the air damper $\odot$ and limit the actuator position for that load.
  
  - Check the flue gas values at a few positions of the load range. Make readjustments in the nominal load range with the adjustable orifice $\odot$, and in the low-fire range with screw $c$ on the governor of the SKP55...
The SKP7... operates with a pressure ratio governor and an adjustable gas / air ratio.

**SKP7... complete with valve**

(Schematic drawing)

Adjustment of governor on modulating burners

- Use setting screw \( \odot / \text{P} \text{GAS} / \text{PAIR} \) to set the gas / air ratio to the required value (coarse setting) and the scale \( \odot \) with setting screw \( \odot \) to zero (refer to Fig. 7643z03)
- Start the burner and run it to about 90 % of the nominal load
- Measure the CO2 or O2 content of the flue gases and optimize the adjustment with setting screw \( \odot / \text{P} \text{GAS} / \text{PAIR} \) (refer to Fig. 7643z03)
- Return to low-fire operation, check the CO2 or O2 content of the flue gases. If necessary, readjust position of the working characteristic with setting screw \( \odot / \odot \) until optimum measured values are attained
- Limit the air damper position for low-fire operation

Meaning of setting screw markings:

+ More gas

- Less gas
Installation and commissioning notes (cont’d)

If a significant parallel displacement of the working characteristic was required to obtain optimum CO2 or O2 values in low-fire operation, the adjustment of the pressure ratio at nominal load or 90% of the nominal load must be checked again and readjusted, if required.

- Run the burner to the required output and limit the nominal load air damper position
- Check the flue gas values at various positions of the load range

If readjustments are required:
- Use setting screw $\Box / \text{PGAS} / \text{PAIR}$ in the nominal load range
- Use setting screw $\Box / \text{PAIR}$ to make parallel displacements of the characteristic in the flow-fire range

If the gas / air pressure ratio lies outside the setting range, an orifice in the gas or air flow can be used to adjust the pressure at the test points on the burner side. Prerequisite is that there is a sufficient gas or air pressure reserve on the inlet side.

1. Setting and display of the gas / air ratio
2. Setting and display of parallel displacement of the working characteristic
3. Test point for combustion chamber pressure
4. Test point for air pressure
5. Test point for gas pressure
6. Stroke indication
7. Operation indicator (LED)
8. Gas valve
Function

If the air pressure (fan pressure) exceeds the maximum value of

- 30 mbar with a $\text{P}_{\text{Gas}} / \text{P}_{\text{Air}}$ ratio of $\geq 2$
- 50 mbar with a $\text{P}_{\text{Gas}} / \text{P}_{\text{Air}}$ ratio of $\leq 2$

permitted for the governor, the pressure must be lowered with a reducing T-piece AGA78 (also refer to «Technical data»).

Air is continuously vented to atmosphere via orifice «D2». The pressure of the following medium will be reduced via throttle «D1». The illustration below shows the correlations.

The reducing T-piece AGA78 is supplied ready for mounting, with $D1 = 1.5$ mm and $D2 = 1.7$ mm.

D2 with a diameter of 2 mm is included as a loose item.

## Ordering examples

When ordering, please give the complete type reference of the actuator (refer to «Type summary»). All components must be ordered as separate items.

### Example of SKP15...

**Actuator**
- On / off
- With end switch
- For AC 230 V / 50 Hz  SKP15.001E2
  
*Connector valve actuator (plug)*  AGA64
*Connector end switch (plug)*  AGA65

The complete gas valve shutoff pressure governor assembly consists of actuator and valve. Please order the required valves as separate items (refer to the relevant Data Sheets). Actuator and valve are supplied unassembled. Assembly is very straightforward and preferably made on the burner.

**Complete combination of actuator / valve consisting of:**
- Gas valve (refer to Data Sheets VG... N7631 and VR... N7636)
- SKP15.001E2 actuator
- Accessories

### Example of SKP25...

**Gas pressure governor with safety shutoff feature:**
- Without end switch
- For AC 230 V / 50 Hz  SKP25.003E2
  
*Connector valve actuator (plug)*  AGA64

**Combination of gas pressure governor / valve consisting of:**
- Gas valve (refer to Data Sheets VG... N7631 and VR... N7636)
- SKP25.003E2 actuator
- Accessories, e.g. AGA25 (damping throttle)
**Accessories** (not supplied as standard, to be ordered as separate items)

**Adapter plug**

**AGA62.000A000**
- For powering both actuators on the double valve VGD... via plug (AGA64)

Example: SKP15... / SKP25.2... with adapter plug AGA62.000A000

Central connection via AGA64 for the **separate** control of valves 1 and valves 2
Facilitates valve proving via pressure switch between the valves or ignition via pilot burner

**Adapter plug** for SKP25.2...

**AGA62.2**
- For powering both actuators and the magnet (stage 2) via plug (AGA64)
  - Both valves are activated simultaneously
  - Including rectifier for DC coil (activation stage 2)

Example: SKP15... / SKP25.2... with adapter plug AGA62.2

Integrated rectifier

Central connection via AGA64 for the common control of valves 1 and valves 2
Accessories (not supplied as standard, to be ordered as separate items) (cont’d)

Heating element
- Refer to Data Sheet N7923
- For use at low ambient temperatures (< -10...-20 °C)

Contact box for valve actuator (power supply)
- Plug-in connector conforming to DIN EN 175301-803-A
- 3 pole +
- Dia. 6...9 mm / max. 1.5 mm²

Example: SKP15... / SKP25... with contact box AGA64
Accessories (not supplied as standard, to be ordered as separate items) (cont’d)

**Contact box** for end switch  
- Plug-in connector conforming to DIN EN 175301-803-A  
- 3 pole +
- Dia. 4.5...11 mm / max. 1.5 mm²

Example: SKP15... / SKP75... with contact box AGA65

---

**Contact box** for powering the magnetic actuator SKP25.2…  
- Plug-in connector conforming to DIN EN 175301-803-A  
- With integrated bridge rectifier  
- 2 pole +  
- Dia. 6...8 mm / max. 1.5 mm²  
- Including profile seal

Example: SKP15... / SKP25... with contact box AGA67

---

Contact box AGA65

Contact box AGA67

---
**Accessories** (not supplied as standard, to be ordered as separate items) (cont’d)

**Adapter plug** for AGA62.000A000

- For common valve control

Example: SKP15... / SKP25... with adapter plug AGA68

**Adapter plug AGA68**

**Motorized setpoint adjuster** for SKP25.7...

- 35 s
- For 5.5 mm stroke
- Refer to Mounting Instructions M7643.3
- Refer to Data Sheet SQS35…, N4573
Accessories (not supplied as standard, to be ordered as separate items) (cont’d)

**Setpoint spring** (yellow) for SKP25...
- Optional for built-in standard spring AGA29
- 15...120 mbar (SKP25.0...)  
- 0...700 mbar at SKP25.4... (optional for AGA23)  
- Refer to Mounting Instructions 74 319 0516 0

**Setpoint spring** (red) for SKP25...
- Optional for built-in standard spring AGA29
- 100...250 mbar (SKP25.0...)  
- 0...1,500 mbar at standard spring SKP25.4...  
- Refer to Mounting Instructions 74 319 0516 0

**Setpoint spring** (blank) for SKP25.3...
- Equivalent built-in standard spring
- ±1.5 mbar

**Setpoint spring** (blank) for SKP25.0...
- Equivalent built-in standard spring
- 0...22 mbar

**Damping throttle** for SKP25.0... and SKP25.3...
- Optional

**Damping throttle** for SKP25.2...
- Optional

**Damping throttle** for SKP55...
- Optional, pipe connection for 8 mm dia.  
- Refer to Mounting Instructions 4 319 9585 0

**Damping throttle** for SKP55...
- Optional
  (same as damping throttle AGA75 but with ¼" threaded connection on both sides)  
- Refer to Mounting Instructions 4 319 9601 0

**Pressure reducing-T-piece** for SKP75...
- Optional
**Accessories** (not supplied as standard, to be ordered as separate items) (cont’d)

*Gasket set*
- For mounting between actuator SKPx5… and valve (VG… / VR…)
- Increases degree of protection from IP54 to IP65
- When using VGG… single valves, observe Data Sheet N7636
- Refer to Mounting Instructions M7643.2 (74 319 0421 0)
