

Rotary actuators for butterfly valves

- · Torque 90 Nm
- Nominal voltage AC 24 V
- · Control: Open-close or 3-point
- Auxiliary switch

Technical data			
Electrical data	Nominal voltage	AC 24 V, 50/60 Hz	
	Power supply range	AC 19.2 28.8 V	
	Power consumption	70 W at nominal torque	
	Current consumption	3.0 A	
	Auxiliary switch	2 x SPDT, 3 A, AC 250 V II 🗆	
	•	Switching points: 90°	
	Connection	Terminals, 2 x 1.5 mm ² or 1 x 2.5 mm ²	
	Parallel connection	No	
Functional data	Torque (nominal torque)	Min. 90 Nm at nominal voltage	
	Manual override	Temporary with handwheel	
	Angle of rotation	90°	
	Running time	15 s	
	Position indication	Mechanical

Safety notes

- The actuator has been designed for use in stationary heating, ventilation and air conditioning systems and is not allowed to be used outside the specified field of application, especially in aircraft or in any other airborne means of transport.
- It may only be installed by suitably trained personnel.
 All applicable legal or institutional installation regulations must be complied with.
- The device may only be opened at the manufacturer's site. It does not contain any parts that can be replaced or repaired by the user.
- Make sure that the maximum length of insulation removed does not exceed 50 mm.
- The device contains electrical and electronic components and is not allowed to be disposed
 of as household refuse. All locally valid regulations and requirements must be observed.

Product features

Simple direct mounting Simple direct mounting on the butterfly valve. The mounting position in relation to the butterfly

The butterfly valve can be closed (turn clockwise) and opened (turn anticlockwise) with the Manual override

handwheel. The handwheel does not move while the motor is running. The butterfly valve

remains in its position as long as no voltage is applied.

Internal heating An internal heater prevents condensation buildup.

Mechanical stops limit the actuator to −2° and 94°<. The internal limit switches interrupt the High functional reliability

voltage supply to the motor. In addition, a motor thermostat provides overload protection

because at 135°C it interrupts the voltage supply.

Combination butterfly valve actuators Refer to the butterfly valve documentation for suitable butterfly valves, their permitted media

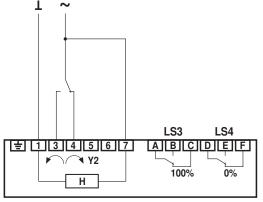

temperatures and closing pressures.

Settings are only allowed to be made by authorised

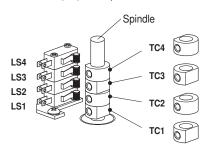

Setting cam

The setting cams for limit and auxiliary switches can be accessed by removing the housing cover.

Optionally, auxiliary switches LS4/LS3 can be connected for signalling.

Limit switches LS2/LS1 interrupt the voltage to the motor and are controlled by setting cams TC.

The setting cams turn with the spindle. The butterfly valve closes when the stem is turning clockwise (cw) and opens when the stem is turning counterclockwise (ccw).

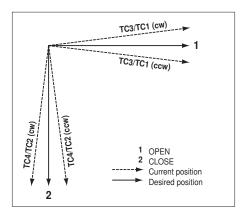

Settings of setting cams TC..

- TC4 for auxiliary switch position closed (factory setting 3°).
- TC3 for auxiliary switch position open (factory setting 87°<3).
- TC2 for limit switch closed (factory setting 0°

 <).
- TC1 for limit switch open (factory setting 90°<3).

Adjusting setting cams

- 1 Use a 2.5 mm Allen key to unscrew the corresponding setting cams TC..
- 2 Turn the setting cam using the Allen key
- 3 Set as shown in the illustration below
- 4 Use the Allen key to tighten the setting cams

Mechanical angle of rotation limitation

The mechanical angle of rotation is set at the factory to $92^{\circ} \circlearrowleft$ and cannot be changed. The handwheel turns the planetary gear unit via a worm gear. The gear unit is mechanically stopped by the two setscrews 1 and 2 (1½ turns of the setscrews correspond to $2^{\circ} \circlearrowleft$). Both limit switches LS2/LS1 are set to $90^{\circ} \circlearrowleft$ and must always switch off the motor **before** the mechanical angle of rotation limitation.

- 2 Angle of rotation limiting CLOSED
