

# Data sheet

# Automatic bypass control AVDO

## Application

AVDO is a self-acting constant flow control primarily used either to maintain minimum flow rates through e.g. a low-capacity gas boiler or to control the differential pressure in a central heating system.

- is dimensioned for pressure stage PN 10, max. 120 °C
- DN 15 and DN 20
- operates without impulse tubes

AVDO:

- opens on rising differential pressure
- has a setting range of 0.05 - 0.5 bar

On delivery valve housing is fit onto AVDO with one of the following fittings: internal socket thread, internal socket thread/nipple or external thread for compression fittings.

### Princip

*Low-capacity gas boiler where maintenance of a min. flow is required*

*Differential pressure control*

## Ordering

Type	Setting range, bar	Connection		Code no.
		Inlet	Outlet	
AVDO 15	0.05 - 0.5	R <sub>p</sub> 1/2 <sup>1)</sup>		R <sub>p</sub> 1/2 <sup>1)</sup>
AVDO 20		R <sub>p</sub> 3/4 <sup>1)</sup>		R <sub>p</sub> 3/4 <sup>1)</sup>
AVDO 25		R <sub>p</sub> 1 <sup>1)</sup>		R <sub>p</sub> 1 <sup>1)</sup>
AVDO 15	0.05 - 0.5	R <sub>p</sub> 1/2 <sup>1)</sup>		R 1/2 <sup>1)</sup>
AVDO 20		R <sub>p</sub> 3/4 <sup>1)</sup>		R 3/4 <sup>1)</sup>
AVDO 25		R <sub>p</sub> 1 <sup>1)</sup>		R 1 <sup>1)</sup>
AVDO 15	0.05 - 0.5	G 3/4 A <sup>2)</sup>		G 3/4 A <sup>2)</sup>
AVDO 20		G 1 A <sup>2)</sup>		G 1 A <sup>2)</sup>
AVDO 25		G 1 1/4 A <sup>2)</sup>		G 1 1/4 A <sup>2)</sup>
AVDO 15	0.05 - 0.5	R <sub>p</sub> 1/2 <sup>1)</sup>		R 1/2 <sup>1)</sup>
AVDO 20		R <sub>p</sub> 3/4 <sup>1)</sup>		R 3/4 <sup>1)</sup>
AVDO 25		R <sub>p</sub> 1 <sup>1)</sup>		R 1 <sup>1)</sup>

<sup>1)</sup> According to ISO 7/1

<sup>2)</sup> According to ISO 228/1

### Accessories (supplied in boxes of 10)

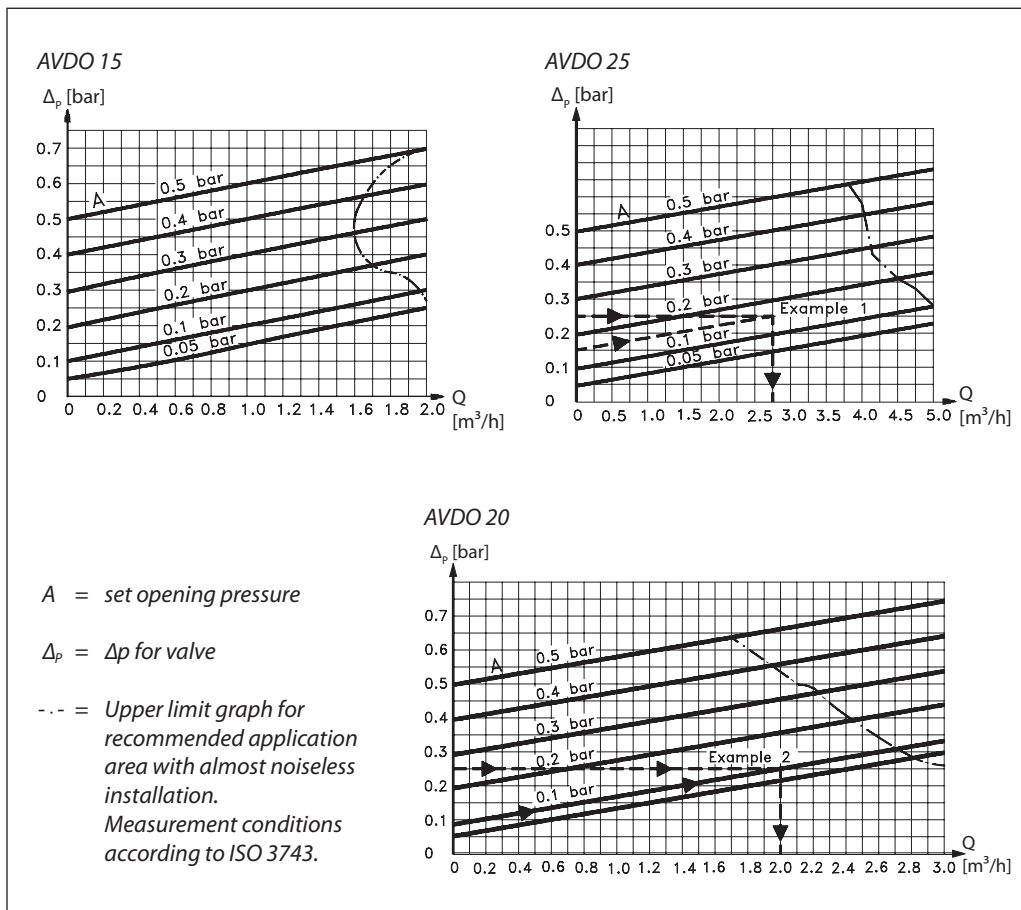

Copper tube fittings		Code no.
AVDO 15	Ø 16 x 1	13U0131
	Ø 18 x 1	13U0132
AVDO 20	Ø 18 x 1	13U0134
	Ø 22 x 1	13U0135
AVDO 25	Ø 28 x 1	13U0140

Technical data

Setting range.....0.05 - 0.5 bar  
 Max. differential pressure .....0.5 bar  
 Operation pressure .....PN 10

Max. flow temperature..... 120 °C  
 Max. leakage at closed valve .....50 l/h

Capacity

Design

Materials

1. Setting handle	Pom-plast
2. Base	Ms 58
3. Spring guide	PPS plastic
4. Spring	Stainless steel
5. Valve cone	PPS plastic
6. Valve body	Ms 58, hot-pressed
7. Setting pin	Stainless steel
O-rings	EPDM

Installation

The valve body must be mounted with flow in direction of the cast-in arrow.

**Setting**

The control is set by turning the setting dial. AVDO has a setting scale on which the opening pressure in bar or mwg can be directly read. The differential pressures stated for a given setting are indicative.

The scale gives the differential pressure across the AVDO when it just begins to open.

**Sizing**

**Example 1:**  
**Bypass control across heating system**

**Given:**

- System, see fig. 1.
- Insignificant pressure loss in pipe from boiler to bypass.
- Pump characteristic, see fig. 2.
- 0.15 bar system differential pressure at max. system load.

**Required:**

- Bypass circulation beginning at 0.15 bar pump pressure.
- Min. 2.0 m<sup>3</sup>/h boiler circulation.

**Seek:**

- A constant flow control that opens concurrently with falling load across the system (closing radiator thermostats).
- A constant flow control that ensures min. 2.0 m<sup>3</sup>/h boiler circulation at min. system load.

**Solution:**

- A 2.0 m<sup>3</sup>/h flow corresponds to a 0.25 bar pump pressure. On closing radiator thermostats AVDO is to ensure min. 2.0 m<sup>3</sup>/h circulation at 0.25 bar differential pressure across AVDO. Choose AVDO 25 that provides 2.75 m<sup>3</sup>/h at 0.25 bar differential pressure across valve. Set AVDO on 0.15 bar required opening pressure.

**Example 2:**  
**Bypass control across circulation pump**

**Given:**

- System, see fig. 3.
- Pump characteristic, see fig. 4.

**Required:**

- Bypass circulation beginning at 0.1 bar pump pressure.
- Max. system differential pressure at closed radiator thermostats must be limited to 0.25 bar.

**Seek:**

- A constant flow control that opens concurrently with falling load across the system (closing radiator thermostats).
- A constant flow control that ensures max. system differential pressure not exceeding 0.25 bar at min. system load.

**Solution:**

- The max. permissible differential pressure 0.25 bar across system corresponds to a 1.8 m<sup>3</sup>/h water volume (fig. 4). At min. load AVDO must ensure 1.8 m<sup>3</sup>/h pump bypass circulation. In this example AVDO 20 must be used - see "Capacity". - As circulation is not to begin before differential pressure across system has exceeded 0.1 bar, AVDO is set on 0.1 bar - see "Setting".
